See it All You Will Love What You See

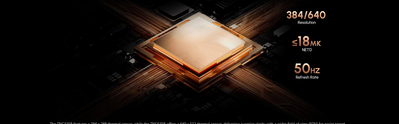
The ThermNight Multispectral series of scopes is the culmination of technology to create the perfect arming solution. It can be used in all weather & lighting conditions. The thermal and night vision combination allows for faster detection of targets and provides high quality digital image for identification.

Thermal & Night Vision Combination

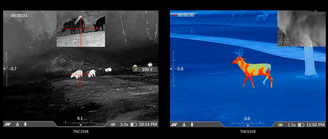
Ballistic Calculator

Day & Night in All Conditions

High-End Thermal Sensor, Enhanced Visibility



The TNC335R features a 384 x 288 thermal sensor, while the TNC635R offers a 640 x 512 thermal sensor, delivering superior clarity with a wider field of view (FOV) for easier target detection. Both models use uncooled VOx microbolometers with a 12um pixel pitch, ≤18mK(NETD) sensitivity, and a 50Hz refresh rate for optimal performance in the field.



Be The Ultimate Predator And See In The Dark With The Sony Starvis 2 Sensor

Starvis2 SONY digital sensor

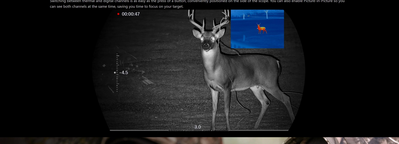
Enhanced Algorithm

1920x1080 Micro OLED

Utilization of SONY's latest CMOS Starvis2 Technology, as well as 3D glass lenses, cutting edge AI imaging algorithms and a world leading 60Hz 1920x1080 Micro OLED display ensures the DNT ThermNight to be perfect for day or night.

Night Vision And Thermal At The Touch of a Button

Switching between thermal and digital channels is as easy as the press of a button, conveniently positioned on the side of the scope. You can also enable Picture in Picture so you can see both channels at the same time, saving you time to focus on your target.



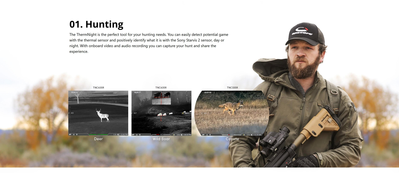
Range To Target With Instantaneous Ballistic Solution

Featuring a compact laser built in scope rangefinder, the device provides high accuracy distance measurements from 5 to 1,000 yards. Once the target is determined, the onboard ballistic calculator quickly generates a ballistic solution, ensuring precise shots. The rangefinder's versatile functionality, seamlessly integrated with many scopes, enhances your shooting experience.

ThermNight Is The Perfect Device For Everyone

The ThermNight scope is a versatile all-in-one device, expertly designed for hunting, long range shooting, tactical operations, and safety use, delivering exceptional versatility and reliability in every situation.

01. Hunting



The ThermNight is the perfect tool for your hunting needs. You can easily detect potential game in the dark with the thermal channel, and effortlessly identify what it is with the Sony Starvis 2 sensor, day or night. With onboard video and audio recording you can capture your hunt and share the experience.

02. Shooting

With a Pro Rod Zeroed Kit, a recoil vehicle it is easy to adjust on the fly for windage. Setup your ballistic profile and sync it to the ThermNight and the onboard ballistic calculator will instantly create a ballistic solution when you range to target. Making long range shooting effortless. Record your shots so you can review your performance and improve your skills.

Longer Eye Relief And Faster Zoom

The new ThermNight feature a longer eye relief of 65mm. Now you can get a more comfortable sight picture with longer length of pull setups. We also changed the zoom wheel to a ring around the entire eyepiece like a traditional scope. It is even easier to turn zoom with gloves and faster to turn using the removable throw lever.

ThermNight Is Built Tough

The ThermNight scopes are meticulously engineered for portability and durability, measuring just 9 inches and weighing 25.6oz. Its IP67 waterproof rating and recoil resistance up to .50 BMG guarantee reliable performance in extreme environments, ensuring dependable operation during hunts, regardless of conditions.
