

RWS .222 Rem. TMS 3,24g

Item no. 2116405

Field of applications

Very well suited for Training, Badger, Fox
Suitable for Roe deer

Properties

Preservation of the game's meat Different
Stopping effect High
Recoil Very weak
Penetration Medium
Likeliness of exit hole Regulary
Cutting of hair at point of impact No

MRD

		50 m	100 m	150 m	200 m	250 m	300 m
	100 m	0.0	±0	-2.0	-10.0	-24.0	-45.0

.222 Rem.

The .222 Rem. is very popular as all-round cartridge for hunting and sport shooting. It is both used for bench rest shooting and for hunting lighter game.

The cartridge is very suitable for hunting roe deer and fox, whereas roe deer can surely be killed up to a distance of 200 m. Furthermore, the cartridge is usable for shooting hare from a high seat as well as wood grouse and black grouse, because the small calibre causes very little damage to the game's meat.

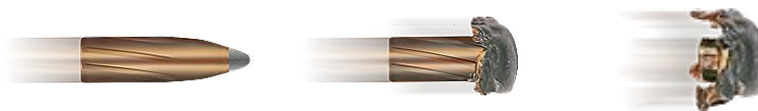

This cartridge was already developed in 1950 and back then was a new development from Remington. Its constructive advantages still matter today: Low recoil and high precision.

With 3.24 g bullets, this cartridge is optimally equipped for hunting. This brings best-possible performance. For sport shooting, there are also 3.37 g match bullets available.

Soft point-bullet

A well-proven projectile type still favoured by many today. High to very high energy output in game. Somewhat stronger fragmentation, therefore exit holes are not always present. Very good stopping effect. Frequently used in battues because of the above reasons and because of a certain insensitivity to minor obstacles. With round or pointed projectile tip.
